INTERPRETATION

Screening result	4 : *** SCREEN POSITIVE ***
Reason	: Increased risk of Down syndrome
Risk of Down	5 : 1 in 45 (at term) [Cut-off 1 in 300]
Risk of NTD	6 : 1 in 520
Comment	7 : Down risk due to maternal age alone is 1 in 400

COMMENTS FROM PRENATAL BIOCHEMISTRY LABORATORY

* Risk of Down syndrome is above screen cut-off. Recommend counseling regarding benefits and risks of amniocentesis.

* Unexplained serum marker levels associated with increased risk of obstetric concerns. If a fetal cause has been excluded, consultation with a maternal fetal medicine specialist or an obstetrician is recommended.
